Ann and Jimmy

Jimmy puts Ann's birthday present in a cuboid box. The dimensions of its edges are positive integers and the sum of its $length$, $width$, and $height$ is N.

What is the *maximum volume* Ann's present box can have?

$\ length + width + height = N$

Input Format

A single integer, N (the sum of the box's $length$, $width$, and $height$).

Constraint
$3 \le N \le 10^3$

Output Format

Print the *maximum possible volume* of the box.

Sample Input 0

```
4
```

Sample Output 0

```
2
```

Sample Input 1

```
8
```

Sample Output 1

```
18
```

Explanation

Sample 0

Here, our only possible dimensions are some combination of 1, 1, and 2. $Volume = 1 \times 1 \times 2 = 2$, so we print 2.

Sample 1

Here are all possible edge dimensions:
$[1,1,6]$, $Volume = 6$.
$[1,2,5]$, $Volume = 10$.
$[1,3,4]$, $Volume = 12$.
$[2,2,4]$, $Volume = 16$.
$[2,3,3]$, $Volume = 18$.
We print the *maximum volume*, which is 18.
